

Gold Seal™ Aerosol

Touch-up Aerosol for the Gold Seal System

Glitsa GoldSeal™ Touch Up Aerosols are the ideal touch up products for small areas with light scratches. This product is most effective on areas of less than one square foot. Glitsa touch up aerosols are intended to rejuvenate the surface appearance of small worn areas. For larger or areas with excessive wear, consult a professional. Glitsa Gold Seal Aerosol is available in Satin and Semi-Gloss sheens.

Directions For Use

- For use on wood floors finished with Glitsa Gold Seal or Lite Scent conversion varnish.
- Clean the area to be touched-up with a water-dampened, not soaking wet, microfiber cloth or pad. Let dry.
- Make sure surface is free of contaminants (oils, wax, grease, etc.)
- Tape or mask off the surrounding area. Generally mask along the edge of the floor boards. Do not leave tape on floor for extended periods. Remove tape immediately after completing repair.
- Do not sand the area. It is important not to expose the bare wood. Gold Seal Aerosol is a touch-up topcoat that is not meant to be applied to bare wood.
- Shake aerosol can well to thoroughly mix and achieve an even sheen.
- CAUTION! Make sure you have good ventilation and no pilot lights on surrounding area. The product is solvent based and propellant is highly flammable. Flammable vapors travel along the ground to distances beyond the work area - always turn off pilot lights when using aerosols indoors.
- Hold the can approximately 18" from the surface and apply a wet coat (do not pool) using a steady back and forth sweeping motion. The product should go down wet to avoid any 'dry overspray'. It is a good idea to test this first on a piece of cardboard so you get a feel for the delivery and speed through the nozzle.
- If clogging develops, turn spray button 1/4 turn. If clogging persists, remove and clean spray button only. DO NOT STICK OBJECTS INTO CAN. Gently replace spray button with twisting motion and exit hole pointing away from you.
- Allow to dry 45-60 minutes between coats.
- Apply another 2 to 3 coats of aerosol.
- Let dry overnight before light foot traffic (socks).
- Use with care for 2 to 3 weeks before covering or cleaning with water.
